LASER WART TREATMENT

Post Treatment Instructions:

- Keep the area covered for 24 hours.
- Wash gently with soap and water.
- Avoid hydrogen peroxide, alcohol, iodine, or bleach to clean the wound. (These agents damage the healing tissue of the wound.)
- Gently pat dry.
- Apply Vaseline to the affected area and cover with a Band-Aid until the skin heals.

Further wart removal at home:

- If you have been instructed to do so, after the wart has started to heal, gently pare down the dead skin on the wart with clippers or a nail file and apply wart solution for wart pad to the area. Doing so helps continue to treat the wart until you can get in again for another treatment.
- To avoid having the skin around the wart become irritated, you can apply a thin layer of Vaseline to the good, normal skin around the wart. This prevents the good skin from coming into contact with the wart removal chemical.

Your satisfaction and excellent outcome are our utmost goals. Please do not hesitate to contact us if you have any questions or concerns about your treatment. (724) 969- LAMB
